PROJECTS

JobOrbit – MERN Job Portal | React.js, Node.js, Express.js, MongoDB, Mongoose, JWT, Cloudinary **Live Demo** **2026**

- Developed a full-stack **MERN** job portal serving **2 user roles** (recruiters and candidates), enabling recruiters to post and manage job listings and candidates to search, filter, bookmark, and apply for jobs.
- Built **15+ REST API endpoints** using **Node.js, Express.js, and MongoDB (Mongoose)** for authentication, job management, company profiles, and application tracking.
- Implemented **JWT authentication** and **role-based access control (RBAC)** across **2 roles**, plus multi-criteria job search and filtering, resume uploads,workflow.
- Integrated **MongoDB Atlas** and **Cloudinary** for cloud data storage and resume uploads; added centralized API error handling and form validation across **10+ routes** to improve reliability of job posting and application workflows.

CodeCore – Online Code Compiler | TypeScript, Node.js, Express.js, PostgreSQL, Redis, Docker **GitHub** **2026**

- Developed a **Docker**-based online code execution platform using **TypeScript, Node.js, and Express.js** to handle code submission, compilation, execution, and runtime error management for **3+ programming languages**.
- Modeled **relational tables** in **PostgreSQL** to store users, code submissions, and execution metadata, persisting source code with structured schemas.
- Configured **Redis** caching for temporary execution data with **TTL-based expiration**, and containerized **services** (backend, PostgreSQL, Redis) using **Docker**.

Thriviefy – Medical Services & Emergency Platform | Node.js, Express.js, MongoDB, EJS **GitHub** **2025**

- Built a full-stack healthcare platform using **Node.js, Express.js, MongoDB, and EJS** : hospital directory, doctor availability, medicine information, and emergency assistance.
- Constructed **geolocation-based** healthcare discovery and ambulance tracking using proximity calculations to rank nearby hospitals and emergency services by distance, backed by REST APIs and location services.
- Designed **REST APIs**, **MongoDB schemas**, user authentication, and **server-side rendered EJS** interfaces to manage **data entities**: users, hospitals, doctors, medicines, and emergency services.
